

**CLiQSPERSE 127** is a highly efficient low foaming wetting agent for aqueous and non-aqueous systems. The non-ionic modified polyglycoether block co-polymer is APE- and VOC-free.

**CLiQSPERSE 127** strongly reduces dynamic surface tension in aqueous systems without promoting foam formation. It is particularly recommended for applications where low dynamic surface tension combined with low foaming is important.

**CLiQSPERSE 127** is recommended for wood protecting systems where strong penetration is required. It also improves compatibility of pigment concentrates with all kind of industrial coatings.

## Typical values:

Appearance: slightly yellow liquid

Solids content: 100 %

Density: ca. 1 g/ml

Viscosity at 20°C: ca. 100

## Level of Use / Incorporation:

**CLiQSPERSE 127** can be added at every production stage. The required loading level depends on the nature of the system. However, a loading level between 0.25 and 1.0 % is typically sufficient to achieve the required properties.

**CLiQSPERSE 127** is compatible with most aqueous general industrial and architectural systems based on a variety of binder systems

**CLiQSPERSE 127** should be stored in a cool dry place.
