

CLiQSPERSE HA is a 100% active solvent-free acidic co-polymer based dispersing agent for non-aqueous and solvent-free industrial coating systems. The highly efficient dispersant provides steric stabilisation to all kind of inorganic pigments and extenders.

CLiQSPERSE HA significantly reduces the millbase viscosity with inorganic pigments and extenders allowing a high pigment load in the grinding media. It significantly improves transparency, hiding power, gloss development and colour strength particularly with titanium dioxide based formulations.

Typical values:

Appearance:	Yellowish liquid
Active content:	100 %
Brookfield viscosity :	ca. 15000 mPa.s
Density (20°C):	ca. 1.16 g/cm ³
Solvents:	none

Level of Use / Incorporation :

CLiQSPERSE HA is best mixed with binders and/or solvents prior to pigment or extender addition.

The optimum loading level of **CLiQSPERSE HA** should be determined for each system using a loading ladder study.

A loading level between 0.5 - 2.5% on total is typically needed to achieve the optimum performance with the dispersing agent.

CLiQSPERSE HA should be mixed before use. Storage at lower temperatures may cause cloudiness in the product. It is recommended to heat the product to max 40°C.
